SUMMARY

I am an undergraduate Software Engineering student at Vocational School, Gadjah Mada University, Yogyakarta, Indonesia. I have a strong interest in backend development and possess both technical and soft skills that support my growth in this field. I am eager to enhance my skills and gain hands-on experience through organizational activities, volunteering, and internship opportunities. I hope to contribute meaningfully while learning to become a more professional and experienced individual in software development.

PROJECTS

SIWASIS (Sistem Informasi Desa Siwalan) Sep 2025 – Nov 2025

Back-End Developer

- Developed the backend for SIWASIS, a web-based village information system for Desa Siwalan, using Laravel
- Built a company profile module to showcase village information and profile to the public
- Developed a financial reporting module to present village budget and expenditure data transparently to residents
- Structured the database schema and backend logic to support dynamic content management for both modules
- Configured a Docker-based environment for consistent development and deployment, with Vite for optimized frontend asset bundling

SiWASIP (Sistem Wasis Arsip) Nov 2025 – Dec 2025

Backend Developer

- Contributed to SiWASIP, an Android application spun off from SIWASIS, focused on document archiving and storage for Desa Siwalan
- Supported backend and API integration so residents and village staff can manage and access administrative documents from mobile devices

AI Recruitment Talent Matching Jan 2026 – Feb 2026

Back-End Developer

- Developed an AI-powered recruitment backend using NestJS and TypeScript that automates candidate evaluation with Google Gemini AI
- Implemented AI-driven CV analysis to parse PDF resumes and generate an intelligent match score with AI-generated reasoning against job requirements
- Built modules for job vacancy management, candidate database, and dashboard analytics, along with JWT-based authentication and Excel export
- Used Prisma ORM with MySQL, Supabase for file storage, documented the API with Swagger/OpenAPI, and deployed the application on Vercel

Qurban Story Mar 2026 – May 2026

Fullstack Developer & QA Automation Engineer

- Developed an e-commerce and information platform for the digital purchase and transparent distribution of qurban offerings, built with PT Saga (Saga Qurban) as a university course project
- Implemented authentication and role-based access control (Customer, Admin, Superadmin) using NextAuth with Google OAuth and JWT
- Built customer-facing modules including product catalog, dynamic checkout for shared cow purchases (up to 7 participants), dashboard, and transaction history
- Integrated the Midtrans Snap API for real-time payment processing with webhook-based transaction state management and automatic 24-hour expiration logic
- Designed the database with Prisma ORM and PostgreSQL (Supabase), and structured the Next.js App Router with separate public and admin layouts
- Containerized the application with Docker, set up a CI/CD pipeline, migrated the platform to a self-managed VPS, and configured load balancing for production reliability
- Led end-to-end automation testing using Selenium WebDriver, Cucumber BDD, and the Page Object Model in Java/Maven, achieving 18 passing test cases covering login, checkout, and payment flows

Partner Feb 2026 – Mar 2026

Backend Developer

- Developed backend services for a mental health companion mobile app (hackathon project) connecting users to AI, peer, and psychologist support
- Built APIs supporting a mood-tracking feature combining text input, computer vision-based expression detection, and journaling to generate personalized recommendations
- Developed APIs for chat, voice, and video communication across AI, peer, and psychologist partner modules, plus safety features (block, report, favorite) and the psychologist booking/payment flow

EXPERIENCE

KOMATIK UGM (Komunitas Mahasiswa TIK) Mar 2026 - Present

Member of Software Research & Development

- Build competitive, research-driven software for the GEMASTIK national competition as part of the Software R&D division
- Leverage advanced development tools and collaborate cross-functionally to design and optimize software solutions

Association of Software Engineering Technology Students UGM (ASSETS) Mar 2026 - Present

Technology Development Lead

- Lead initiatives to teach core technology development principles to student developers, with a specialized focus on backend engineering
- Manage cross-functional teams through the full lifecycle of real-world projects, ensuring best practices in system design and collaboration
- Balance technical mentorship with project management to help team members build scalable, production-ready software

Google Developer Group on Campus UGM Nov 2025 - Present

Hacker

- Engineer solutions for the Google Solution Challenge by applying Google developer tools and industry best practices
- Collaborate with Hipsters and Hustlers to bridge technical architecture, user-centric design, and market viability, turning complex problems into scalable applications

Sekolah Vokasi Universitas Gadjah Mada (SV UGM) Aug 2025 - Dec 2025

Teaching Assistant of Computer Programming Practicum

- Assisted the lecturer in conducting the computer programming practicum using Python
- Prepared instructional materials, provided technical guidance to students, and evaluated assignments and practicum outcomes

EDUCATION

Diploma of Software Engineering Technology 2024 - Present

Universitas Gadjah Mada | GPA: 3.81

Mathematics and Science 2021 - 2024

SMA Negeri 4 Surakarta

AWARDS AND CERTIFICATIONS

- 3rd Place of International Dam Innovation Contest (IDIC) | Civil Engineering International Competition (CEIC) at Universitas Diponegoro | 2026
- 2nd Place of National Student Scientific Writing Competition | Pesta Rakyat UNIB (Universitas Bengkulu) x Fision | 2025

COMPUTER SKILLS

Programming: Python, Java, PHP, JavaScript, TypeScript, Kotlin

Frameworks & Libraries: Next.js, React.js, Laravel, NestJS, Prisma, Pandas, NumPy, scikit-learn

Databases: MySQL, PostgreSQL, Oracle

Tools & Technologies: Git, GitHub, Visual Studio Code, Docker, CI/CD, Selenium WebDriver, Cucumber BDD, Maven

Other Skills: RESTful APIs, Data Analysis, MVC Architecture, AI/LLM Integration (Gemini API)
